COMMUNICATION

The European Patent Office herewith transmits as an enclosure the European search report for the above-mentioned European patent application.

If applicable, copies of the documents cited in the European search report are attached.

☒ Additional set(s) of copies of the documents cited in the European search report is (are) enclosed as well.

The following specifications given by the applicant have been approved by the Search Division:

☐ abstract

☒ title

☒ The abstract was modified by the Search Division and the definitive text is attached to this communication.

The following figure will be published together with the abstract:

1

REFUND OF THE SEARCH FEE

If applicable under Article 10 Rules relating to fees, a separate communication from the Receiving Section on the refund of the search fee will be sent later.

ABSTRACT / ZUSAMMENFASSUNG / ABREGE

02257209.3

A flexible coupling for a ducting system. The coupling comprises a first member (1) including a first engaging member (2), the first member defining a receiving portion and a second member (3) including a second engaging member (4), the second member, in use, engaging with the receiving portion such that the first (1) and second (3) members can be held together to define a retaining cavity. The coupling has a seal (6) arranged to seal, in use, the gap between the first (1) and a third (7) member. A third member (7) is retained, in use, in the retaining cavity such that it is rotatable in any of the three rotational degrees of freedom within the cavity. There is a carbon first load bearing member (8) positioned between the second (3) and third (7) members such that, in use, the load bearing member (8) provides a load bearing surface in engagement with the surface of the second member (3).
